Farah Amer

Activities

RBC Borealis Social Committee

Led team social initiatives across Toronto, Calgary, and Vancouver, organizing team-building events and coordinating a cross-city off-site.

Airess — Women Building the Future of AI

Volunteered with Airess, a Toronto-based community for women in AI, helping organize events, panels, and workshops for technical and non-technical audiences.

Skills

Languages:
TypeScript, JavaScript, Python, C#, SQL

Frontend:
React, Vue.js, Angular, HTML, CSS

Backend & APIs:
FastAPI, Flask, Node.js, REST APIs, WebSockets, Webhooks, Server-Sent Events (SSE), JWT, OAuth

Databases:
PostgreSQL, MongoDB, Redis

Cloud & DevOps:
Docker, Kubernetes, OpenShift, AWS S3, GitHub Actions, CI/CD, Git

Education

04/2024

Queen's University
Bachelor of Computing (Honours)
Specialization in Software Design

Experience

RBC Borealis · 05/2024 - 10/2026

Senior Full-Stack Software Developer · 03/2026 - 10/2026

- Developed Python/FastAPI middleware integrating six AI agents for a production commercial credit underwriting platform, supporting more comprehensive, data-driven credit memos.
- Implemented DAG-based orchestration to manage inter-agent dependencies and parallelize LLM calls using asynchronous Python coroutines.
- Implemented PostgreSQL-backed task queueing with PgQueuer, adding bounded retries and failure logging to improve resilience against transient AI service failures.
- Built an Angular-based interface enabling users to generate and manage AI reports, maintain document knowledge bases, configure agent dependencies, and export results.
- Helped architect the transition to a native AI agent framework, defining API contracts and planning middleware integration changes.

Full-Stack Software Developer · 05/2024 - 03/2026

- Developed a full-stack AI meeting intelligence application using React, TypeScript, Node.js, and Express to automate meeting transcription, summaries, and action items through audio uploads and LLM webhooks.
- Built a self-service wealth management platform using Vue.js and Python/FastAPI, replacing quarterly spreadsheets with fresh client insights and ranked business opportunities.
- Integrated backend APIs and AI-generated outputs into production applications, collaborating with data engineering and ML research teams on prompt optimization and response quality.
- Maintained CI/CD pipelines and application deployments using GitHub Actions and OpenShift, supporting reliable production releases.

RBC Data & Analytics · 05/2023 - 08/2023

Full-Stack Software Developer Co-op

- Contributed to a large-scale internal data platform using React, Angular, Node.js, Flask, PostgreSQL, and C#.
- Developed reusable components for the team's design system, improving consistency and accelerating future development.
- Co-developed and pitched a winning automated scheduling solution to senior bank executives, contributing to its implementation.

RBC Amplify · 05/2022 - 08/2022

Software Developer Co-op

- Developed an ML-powered error prediction application using React, Flask, and AWS S3 for error log analysis.
- Collaborated with Site Reliability Engineers to define requirements and refine the solution through user feedback.
- Pitched the solution to senior bank executives, highlighting its technical approach and business value.
