Work Experience

RBC Borealis — March. 2026 - Oct. 2026

Senior Full Stack Software Developer

- Took greater ownership of the architecture, design, and development of enterprise AI applications, translating complex technical and business requirements into scalable solutions.
- Designed and implemented integrations for agentic AI systems, including DAG-based workflow orchestration and frontend integration with AI-powered backend services.
- Collaborated with cross-functional engineering and ML teams to address AI integration challenges, improve agent output reliability, and enhance user interactions with AI-generated results.

RBC Borealis — May 2024 - March 2026

Full Stack Software Developer

- Developed and maintained enterprise AI-powered applications using Vue.js, React, Angular, and Python, integrating AI capabilities into internal banking workflows.
- Collaborated with data engineering and ML research teams to integrate backend APIs, optimize prompts, and refine agent outputs, delivering accurate, consistent, and actionable AI-generated insights through production applications.
- Managed CI/CD pipelines and application deployments using GitHub Actions and OpenShift, supporting secure, reliable, and compliant production releases.

RBC Data & Analytics — May 2023 - Aug. 2023

Full Stack Software Developer Co-op

- Utilized React, Angular, Node.js, Flask, PostgreSQL, and C# to contribute to one of the bank's largest pieces of internal software that distributes and makes data accessible throughout the bank.
- Created crucial design components within the team's design system to speed up development time for future projects.
- Won a business case competition by automating the way in which the operational committee organizes their schedule and participated in implementing my team's solution.

RBC Amplify — May 2022 - Aug. 2022

Software Developer Co-op

- Developed an application using React, Flask, S3, and TensorFlow/ PyTorch to build a machine learning tool that predicts future errors before they occur through error log analysis.
- Conducted research on our problem space and our potential users in tandem with Site Reliability Engineers and subject matter experts.
- Filed a patent for the data pre-processing of application level error logs to be fed into our machine learning model.

Education

Queen's University — Apr. 2024

Bachelor of Computing (Honours) - Specialization in Software Design

- GPA: 3.9/4.0
- Dean's Award of Excellence, Dean's Honour List with Distinction
